

Capacity Planning of Computer Systems and Networks

Assignment 1

Cai Xiangyu (z3474703)

a) $D(CPU_1)$

$$= V(CPU_1) * S(CPU_1)$$

$$= \frac{C(CPU_1)}{C(0)} * \frac{B(CPU_1)}{C(CPU_1)}$$

$$= \frac{B(CPU_1)}{C(0)}$$

$$= \frac{127}{145} = 876ms$$

b) Service time(Disk_2) = $\frac{U(Disk_2)}{X(Disk_2)}$

$$U(Disk_2) = \frac{B(Disk_2)}{T} = 286/600$$

$$X(Disk_2) = \frac{C(Disk_2)}{T} = 1250/600$$

$$\text{Service time(Disk_2)} = 286/1250 = 229ms$$

c) System throughput = $\frac{C(0)}{T} = \frac{145}{10*60} = 0.241$

$$D(CPU_1) = \frac{U(CPU_1)}{\text{throughput}} = \frac{B(CPU_1)}{C(0)} = \frac{127}{145}$$

$$D(CPU_2) = \frac{U(CPU_2)}{\text{throughput}} = \frac{B(CPU_2)}{C(0)} = \frac{297}{145}$$

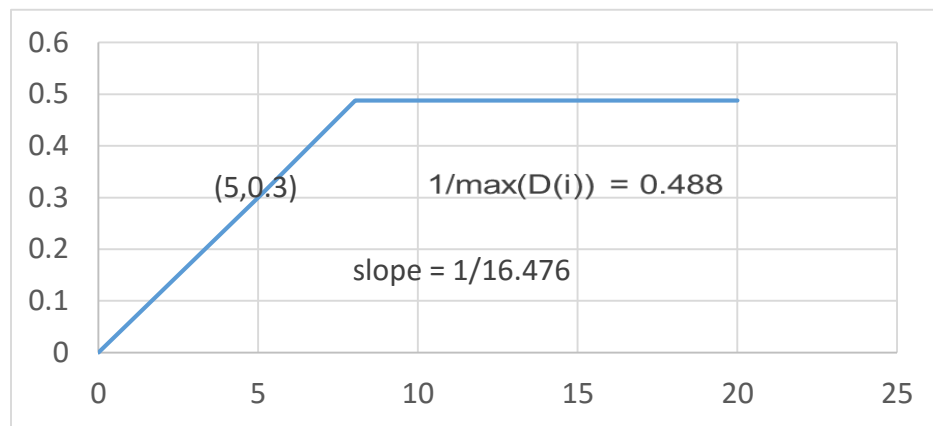

$$D(Disk_1) = \frac{U(Disk_1)}{\text{throughput}} = \frac{B(Disk_1)}{C(0)} = \frac{116}{145}$$

$$D(Disk_2) = \frac{U(Disk_2)}{\text{throughput}} = \frac{B(Disk_2)}{C(0)} = \frac{286}{145}$$

$$D(Dispatcher) = \frac{U(Dispatcher)}{\text{throughput}} = \frac{B(Dispatcher)}{C(0)} = \frac{113}{145}$$

$$\text{Max}(D(i)) = D(CPU_2) = \frac{297}{145}$$

$$\sum_{i=1}^k D(i) = \text{Think time} + \frac{127 + 297 + 116 + 286 + 113}{145} = 16.476$$

Bound is $\frac{N}{\sum_{i=1}^k D(i)} = \frac{5}{16.476} = 0.3$

d) The maximum possible throughput is 0.3

Minimum possible response time = $10 - 1/0.3 = 6.67s$
